## EXECUTIVE SUMMARY

In response to an Administrative Order from the U.S. Environmental Protection Agency, in an effort to reduce sewer spills and beach closures, and under the direction of Council Policies 400-13 and 400-14, the City of San Diego's Public Utilities Department (Public Utilities) has adopted the Canyon Sewer Cleaning Program and the Long-term Canyon Sewer Maintenance Program (Program) to access, clean, and repair miles of sewer infrastructure located in canyons and other environmentally sensitive areas.

A Programmatic Environmental Impact Report (PEIR) was prepared to study the Program and in July 2004 the City of San Diego approved Coastal Development Permit No. 13506 and Site Development Permit No. 13507 for the Program.

The objectives of the Program are:

- To complete the inspection and cleaning of City of San Diego sewer infrastructure located in canyons and other environmentally sensitive areas.
- To identify and implement efficient, effective, and environmentally sensitive means to accomplish the necessary canyon sewer cleaning activities.
- To provide for long-term maintenance of canyon sewer infrastructure, recognizing that availability of access to the infrastructure is essential for an effective long-term program, in accordance with Council Policy 400-13.
- To evaluate and pursue options to redirect sewage flows out of canyons and into street sewer lines or other accessible areas, where feasible and appropriate pursuant to Council Policy 400-14.

This annual report, as required by the site development permit condition 27, provides a Progress Report to the Open Space Canyons Advisory Committee (OSCAC) on the Program for the year from July 1, 2017 through June 30, 2018. This report provides the status of all Program activities within the reporting year, including habitat mitigation, long term access planning and implementation, construction and emergency projects, and 25 month revegetation and restoration projects.

## LONG TERM ACCESS PROJECTS

Long Term Sewer Access Projects provide access paths to sewer infrastructure for ongoing maintenance, inspections, and cleaning. One of the first steps in determining whether an access path is needed is to prepare a redirection of flow (ROF) study. A ROF study evaluates the economic feasibility of removing all or part of the sewer from an environmentally sensitive area or canyon versus providing access to the sewer if it remains in place.

When redirection of flow is found to be infeasible from all or portions of environmentally sensitive areas/canyons, Public Utilities staff develop a Long-Term Maintenance and Emergency Access Plan (MEAP) in accordance with Policy 400-13. Public Utilities staff prepares and submits a Substantial Conformance Review (SCR) packages to the Development Services Department (DSD) for a determination whether the proposed mitigation, restoration, and access planning for individual canyon areas or project is in conformance with the PEIR and Program master permits. Project specific design plans are then prepared as necessary to provide specific direction on access improvements and construction that include additional information necessary to obtain regulatory agency permits. Separate permits or clearances are obtained from the regulatory agencies prior to implementation of long term access projects.

The following canyons are in various stages of long term access planning and implementation:

- **32<sup>nd</sup> Street/Huckleberry** – Public Utilities Wastewater Collection (WWC) Division constructed the new access paths in February 2017. The project is currently in the post construction 25-month maintenance & monitoring period.

**Alvarado Phase I** – Phase I was fully implemented by City crews in July 2018. Phase I included the creation of a 10-foot-wide sewer access path to accommodate

the required cleaning equipment, as well as improvement of one pipe culvert crossing. The improved culvert crossing not only provides for a safer more stable

access path for City crews, but also improves the water flow in the canyon. Phase I expands access to 30 % of the manholes for cleaning and inspections.

- **Alvarado Phase II** - Phase II will include additional stream crossing improvements that will expand and improve access to 100% of the canyon manholes. Design for Phase II is complete, and once Public Utilities receives the final biological report, resource agency permits will be submitted. Public Utilities anticipates implementation of Phase II to occur September 2019 or 2020.
- **East Tecolote Phase I** - Phase I was under construction in July 2018 and was fully implemented by City crews by September 2018. Phase I included the addition of a bridge that can accommodate the necessary sewer cleaning equipment. The bridge reduced wetland impacts to the streambed by eliminating the need for an Arizona type crossing. This phase has expanded access to 75% of the canyon manholes for cleaning and inspections.

- **East Tecolote Phase II** – Phase II will include additional stream crossing improvements that will expand and improve access to 100% of the canyon manholes. Design will be finalized in 2019, and resource agency permitting will follow. Public Utilities anticipates implementation of Phase II to occur September 2020.
- **Norfolk Canyon** – Public Utilities completed a technical memorandum that included recommendations for long-term access improvements. The memorandum identified the need for the upsizing of one pipe culvert as well as three streambed crossing improvements. Public Utilities plans to move forward with obtaining engineered plans, along with the required environmental reports, and Resource Agency permits.

- **Home Avenue Trunk Sewer** – Construction was completed by WWC in fall 2017. The project is currently in the post construction 25-month maintenance & monitoring period.
- **South Chollas** –The post construction 25-month maintenance & monitoring period has been completed. Public Utilities will continue maintenance of the path as-needed for cleaning and inspection purposes.

*South Chollas –Improved Access Path to Manhole 449*

- **North, Central, and Southern Tecolote Canyon** – Access crossing improvements are included with the Tecolote Canyon Trunk Sewer Replacement Capital Improvement Project (CIP) project. The CIP project is currently in the design and permitting stage. Currently the project is scheduled to start construction December 2019.
- **Mt. Elbrus** – The new access path was completed by WWC in January 2017. The project is currently in the post construction 25-month maintenance & monitoring period.
- **Interstate (I)-15 & Balboa** – City crews began implementation of this access project in September 2018. Public Utilities anticipates completion by February 2019. The project includes the creation of an 8-foot-wide sewer access path and one turnaround area. Prior to construction PUD conducted an environmental assessment, and went through Substantial Conformance Review, from Development Services, and received a Section 1602 Lake and Stream Alteration Agreement from CDFW
- **Interstate (I)-15 & Adams** – This project is the planning stage, and will include expanding portions of the existing 8-foot-wide access path to 10 feet wide path to accommodate the required cleaning equipment (flusher), and will include stream

crossing improvements. Public Utilities anticipates construction of this project to commence in September 2020.

- **San Clemente Canyon** - This project is in planning stage, and will include improvements to the existing access path, and establishment of new access. Public Utilities anticipates construction of this project to commence September 2020.

## MAINTENANCE, MONITORING, AND MAPPING

Wastewater Collection Division staff coordinated closely with Environmental Staff (Environmental Section) in ensuring daily activities were in compliance with the Program's master permit, agency permits, and environmental regulations.

Environmental training is provided to all Public Utilities staff working in canyons/environmentally sensitive areas. Crews are directed to contact staff in the Environmental Section for guidance and support for work that may impact sensitive resources.

The Environmental Section reviews daily field work reports, facilitates monthly meetings to discuss and review all work in canyons, obtains permits, and provides daily support to field crews. Work conducted in canyons/environmentally sensitive areas is monitored by the Environmental Section. Bird nesting surveys, vegetation and sensitive species mapping, jurisdictional delineations and other biological surveys are completed by the Environmental Section for daily WWC operation and maintenance of sewer lines in canyons.

Public Utilities has increased its efforts to inventory and map existing access to sewers in canyons. This inventory provides information on existing access conditions, identifies access needs and areas of concern), and facilitates ongoing maintenance. To date, 173 miles of pedestrian and vehicular paths have been mapped with the GPS data for 137 canyon areas. Vehicle access path data is available on Atlas.

Access Path Inventory Map for Alvarado

## CONSTRUCTION AND EMERGENCY PROJECTS

Below is a list of sewer emergency projects and/or pipeline/manhole repair projects that occurred in canyons or environmentally sensitive areas since July of 2017:

### Emergency Projects

- 55<sup>th</sup> Street Emergency Sewer Point Repair
- Bancroft Sewer Realignment Emergency
- Gesner Canyon Emergency Sewer Repair (Point Repair)
- Rose Canyon Emergency Sewer Repair (Point Repair)
- South Chocolate (Juniper) Canyon Emergency Sewer Point Repair
- Stevenson Canyon Emergency Sewer Pipe Protection Emergency

*Rose Canyon Emergency Sewer Repair*

### Other Construction/Maintenance Projects

- PS 77 Sub Aqueous Condition and Line Stop Manhole Access (Pipe Repair)
- Bounty and Waring (Navajo Canyon) Pipe Repair (Pipe Repair)
- Peñasquitos TS Condition Assessment
- CCTV Sewer Main and Manhole Inspections 2017/2018 (Condition Assessment)
- West San Diego River Vault Repair
- Upas Street Spot Repair
- Overlake Ave Access Path Gate Installation
- Otay River Sewer Overflow Structure Access Project
- Mission Valley Path Maintenance

Public Utilities crews completed access path maintenance in multiple canyon areas to facilitate access for cleaning, inspections and maintenance. Path maintenance is usually limited to trimming or mowing vegetation that has grown on the pathways. Maintenance on the access path precedes manhole cleaning and maintenance.

Public Utilities staff manages emergency and non-CIP construction projects. Environmental review, monitoring, and reporting are done in adherence with the Program. Biological assessments have been prepared and permits have been obtained as necessary for these emergency and construction projects. Following construction, revegetation and/or restoration has been implemented in accordance with the Program.

## 25 MONTH REVEGETATION AND RESTORATION PROJECTS

Conditions of the Master Site Development Permit require effective erosion control on access paths and restoration of temporarily impacted areas outside of permanent access paths following construction. Each impact area is monitored and maintained for a period of no less than 25 months.

Revegetation sites include all areas required for permanent access to utilities including the access paths, turn-arounds, and work areas around manholes. When new access paths and permanent access areas are created, revegetation is required. The goal of revegetation is successful erosion control. Maintenance and monitoring of revegetation areas may include hydroseeding or hand-seeding, weeding, mulching or installing wood chips on the path, installation of temporary Best Management Practices (BMPs), site monitoring or a combination of the above treatments.

Restoration sites are areas impacted outside of permanent access areas. Restoration areas are typically staging areas, emergency access or work areas, pipeline repair areas, unauthorized impact areas, or areas disturbed as a result of temporary widening of pathways. The goal of habitat restoration is re-establishment of native habitat. Restoration areas shall obtain native plant coverage equal to the native species present in the adjacent area or 30% coverage, whichever is greater. Restoration areas shall support no more than 1% perennial weeds and no more than 10% annual weeds during the 25-month maintenance period. Maintenance and monitoring of restoration areas may include hydroseeding or hand-seeding, installation of container plants, weeding, and installation of temporary BMPs, temporary irrigation, site monitoring or a combination of the above treatments.

Seed and plant material for revegetation and restoration efforts are typically from locations within 25 miles of the coastline in San Diego County. Maintenance and monitoring of all sites continues for 25 months or until successful erosion control is achieved on the paths and/or restoration goals are met outside of the paths.

During this reporting year, eight (8) sewer revegetation projects were completed. In addition to eighteen (18) ongoing projects, and six (6) additional sites were installed and maintenance and monitoring of these sites was initiated.

Updates on the status of the revegetation and restoration projects are a regular agenda item at OSCAC's meetings. See *Attachment A* for the June 2018 Revegetation and Restoration Projects Status update table.

*South Chocolate (Juniper) Canyon Emergency Sewer Point Repair Revegetation*

*Stevenson Canyon Emergency Pipe Protection Restoration (Hydroseeding)*

## MITIGATION PROJECTS

In accordance with applicable local, state, and federal regulations, restoration, revegetation, or mitigation is required for significant biological impacts resulting from the Program, such as the creation of access paths through environmentally sensitive areas, emergency repairs, and pipeline repair projects. In order to mitigate these impacts, Public Utilities staff has identified and implemented a number of habitat mitigation projects located within various watersheds where past, current, or future impacts have or may occur. These mitigation sites are designed and built to accommodate numerous Public Utilities projects. Allocation of mitigation is completed as each project is planned, permitted and constructed. Post construction adjustments are made to mitigation assignments based on actual project impacts. Project impacts and mitigation assignments are tracked internally within the Canyon Database. A summary of acreages available, acreages assigned, and the balance is included as Attachment B. A more detailed summary of assignments is included as Attachment C.

The location of these projects is shown in Figure 1. The status of each habitat mitigation project is summarized below.

*Los Peñasquitos North Mitigation Site*

**Figure 1**  
Mitigation Sites  
Overview Map

## Canyon View Upland Restoration Mitigation Project

**Canyon View Upland Restoration: Native Grassland**

This project is located east of Black Mountain Road and south of Adolphia Street in Los Peñasquitos Canyon (Figure 2). Construction began in September 2011. The project included the restoration of approximately 0.9 acres of native grassland and 6.49 acres of Diegan coastal sage scrub habitat, within Los Peñasquitos Canyon Preserve. The project serves to mitigate impacts associated with Public Utilities projects located in the preserve. Bobcat (*Lynx rufus*) and coastal California gnatcatchers (*Polioptila californica californica*) have been observed foraging onsite within the native grassland and Diegan coastal sage scrub habitat. This site has successfully achieved the goal of restoring low quality non-native uplands into high quality native habitats. This project completed the 5-year maintenance and monitoring period in 2017 and received sign-off in spring of 2018.

Mitigation Credits			
Habitat Type	Acres	Assigned	Balance
Diegan Coastal Sage Scrub (Tier II)	6.49	1.61	4.88
Native Grassland (Tier I)	0.89	0.02	0.87

## Central Tecolote Enhancement Mitigation Project

This project is located south of Balboa Avenue and north of Mt. Acadia Boulevard in Tecolote Canyon (Figure 3). The project consists of riparian enhancement and native grassland/coastal sage scrub restoration in addition to a weed management area that encompasses all of Tecolote Creek from Balboa Ave. to Mt. Acadia Dr. Public Utilities staff conducted a site sign off visit in April, 2018 with USACE, and in

*Central Tecolote Enhancement: Oak Riparian Forest*

May, 2018 with CDFW, RWQCB, and City Development Services Dept. (DSD). At the end of Year 5 vegetation communities had met or exceeded the success criteria milestones, successfully completing the 5-year maintenance and monitoring period and received regulatory agency sign-off in June 2018.

Exotic species removed from the site include: Brazilian pepper tree, pampas grass, Mexican fan palm, Canary Island date palm, eucalyptus, fennel (*Foeniculum vulgare*), mustard, and yellow sweet clover (*Melilotus indicus*). Maintenance activities completed this year include weed and trash removal, cutting installation, additional seeding, and site protection repair.

The City Public Works Department's is currently proposing a Tecolote Canyon Trunk Sewer Improvement Project; this project is currently being designed. A portion of the CIP project has the potential to overlap with the mitigation project area. At the end of Year 5 a final vegetation mapping and jurisdictional delineation was performed in order to rectify any changes to the final mitigation areas.

Mitigation Credits			
Habitat Type	Acres	Assigned	Balance
Oak Riparian Forest (Enhancement)	8.06	2.08	5.98
Diegan Coastal Sage Scrub (Tier II)	2.08	0.62	1.46
Native Grassland (Tier I)	1.64	0.10	1.54

## Rose Canyon Mitigation Project

The Rose Canyon Mitigation Project is located in the Rose Canyon Open Space Park, starting approximately 0.5 mile west of Genesee Avenue and continuing another 0.5 mile further west into the park (Figure 4). Approximately 5 acres of oak riparian forest, southern cottonwood-willow riparian forest, and mule fat scrub were created adjacent to Rose Creek with 0.61 acre of riparian enhancement. Approximately 4.75 acres of Diegan coastal sage scrub habitat was restored on the upland areas.

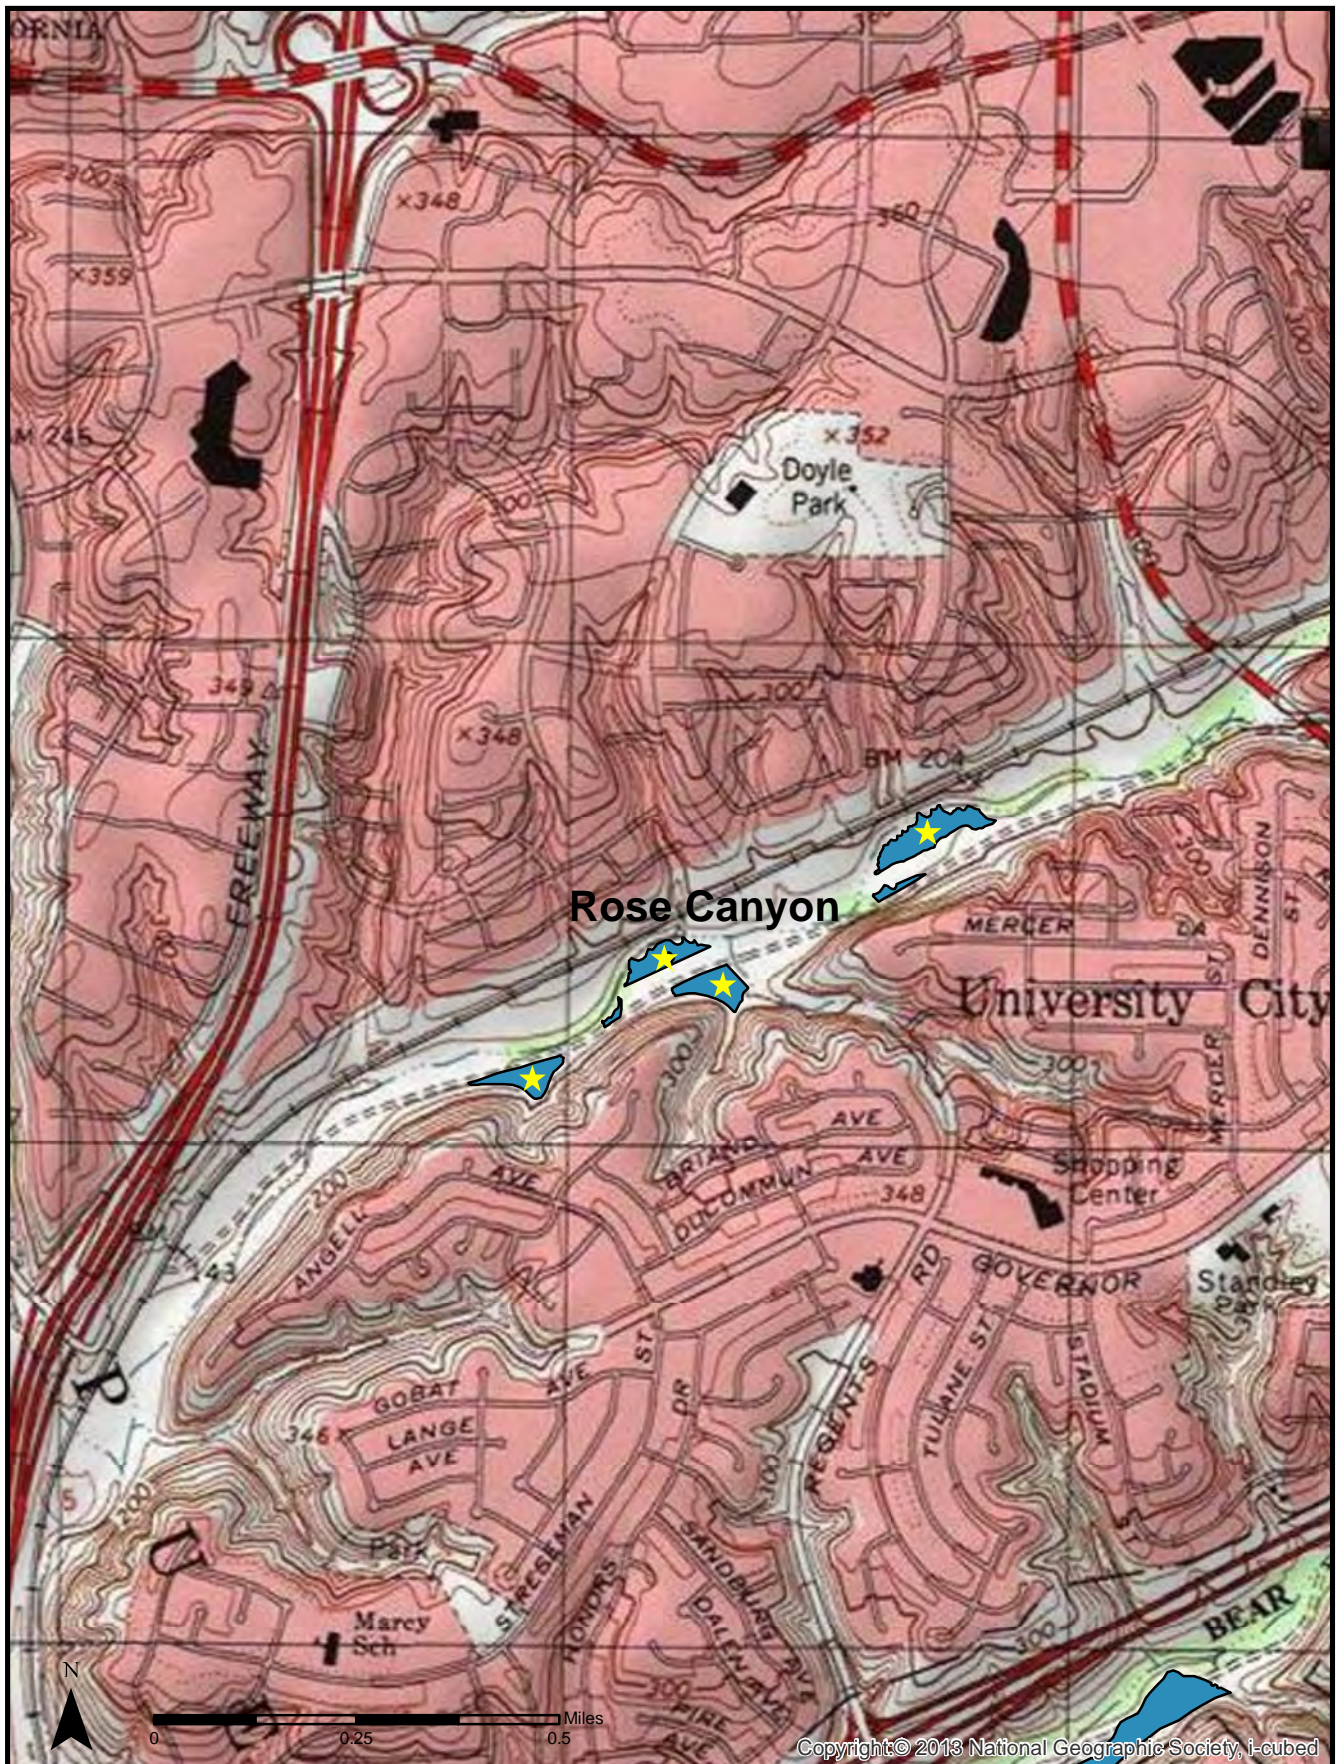

Rose Canyon Mitigation: Mulefat Scrub

The project has completed 10 years of maintenance and received regulatory sign-off in July 2016. Vegetative cover at the site is very high, uplands habitat exceeds 90% cover and has a high diversity of species that includes California sagebrush (*Artimisia californica*), white sage (*Salvia apiana*), coyote bush (*Baccharis pilularis*), and San Diego goldenbush (*Isocoma menziessii*). The wetland creation habitat exceeds 100% cover in some sections of the project area with canopy height reaching 20 to 25 feet; many cottonwood (*Populus* spp.) and willow (*Salix* spp.) saplings were observed on the site. Drift deposits and the development of sand bars were observed throughout the wetland enhancement areas indicating wetland hydrology was present. The native grassland habitat continues to do well, with increased coverage of purple needlegrass and (*Stipa pulchra*) and beardless wild rye (*Elymus triticoides*). The site will continue to receive maintenance on a semi-annual to quarterly basis to help ensure native habitat continues to increase in maturity and spatial coverage. This year maintenance crews focused on control and removal of non-native annuals such as mustard, Mexican fan palm and sweet clover .

Mitigation Credit Status			
Habitat Type	Acres	Assigned	Balance
Riparian Forest (Creation)	5.05	3.19	1.86
Riparian Forest (Enhancement)	0.61	0.55	0.06
Diegan Coastal Sage Scrub (Tier II)	4.75	2.48	2.27
Native Grassland (Tier I)	0.28	0.09	0.19

## San Clemente Canyon Mitigation Project

The San Clemente Canyon Mitigation Project provides mitigation for impacts associated with Public Utilities projects within San Clemente Canyon / Marian Bear Memorial Park and surrounding watershed. The project is located at two sites within the park, one just east of the Regents East parking area and the other approximately three-fourths of a mile east of the Genesee parking area (Figure 5).

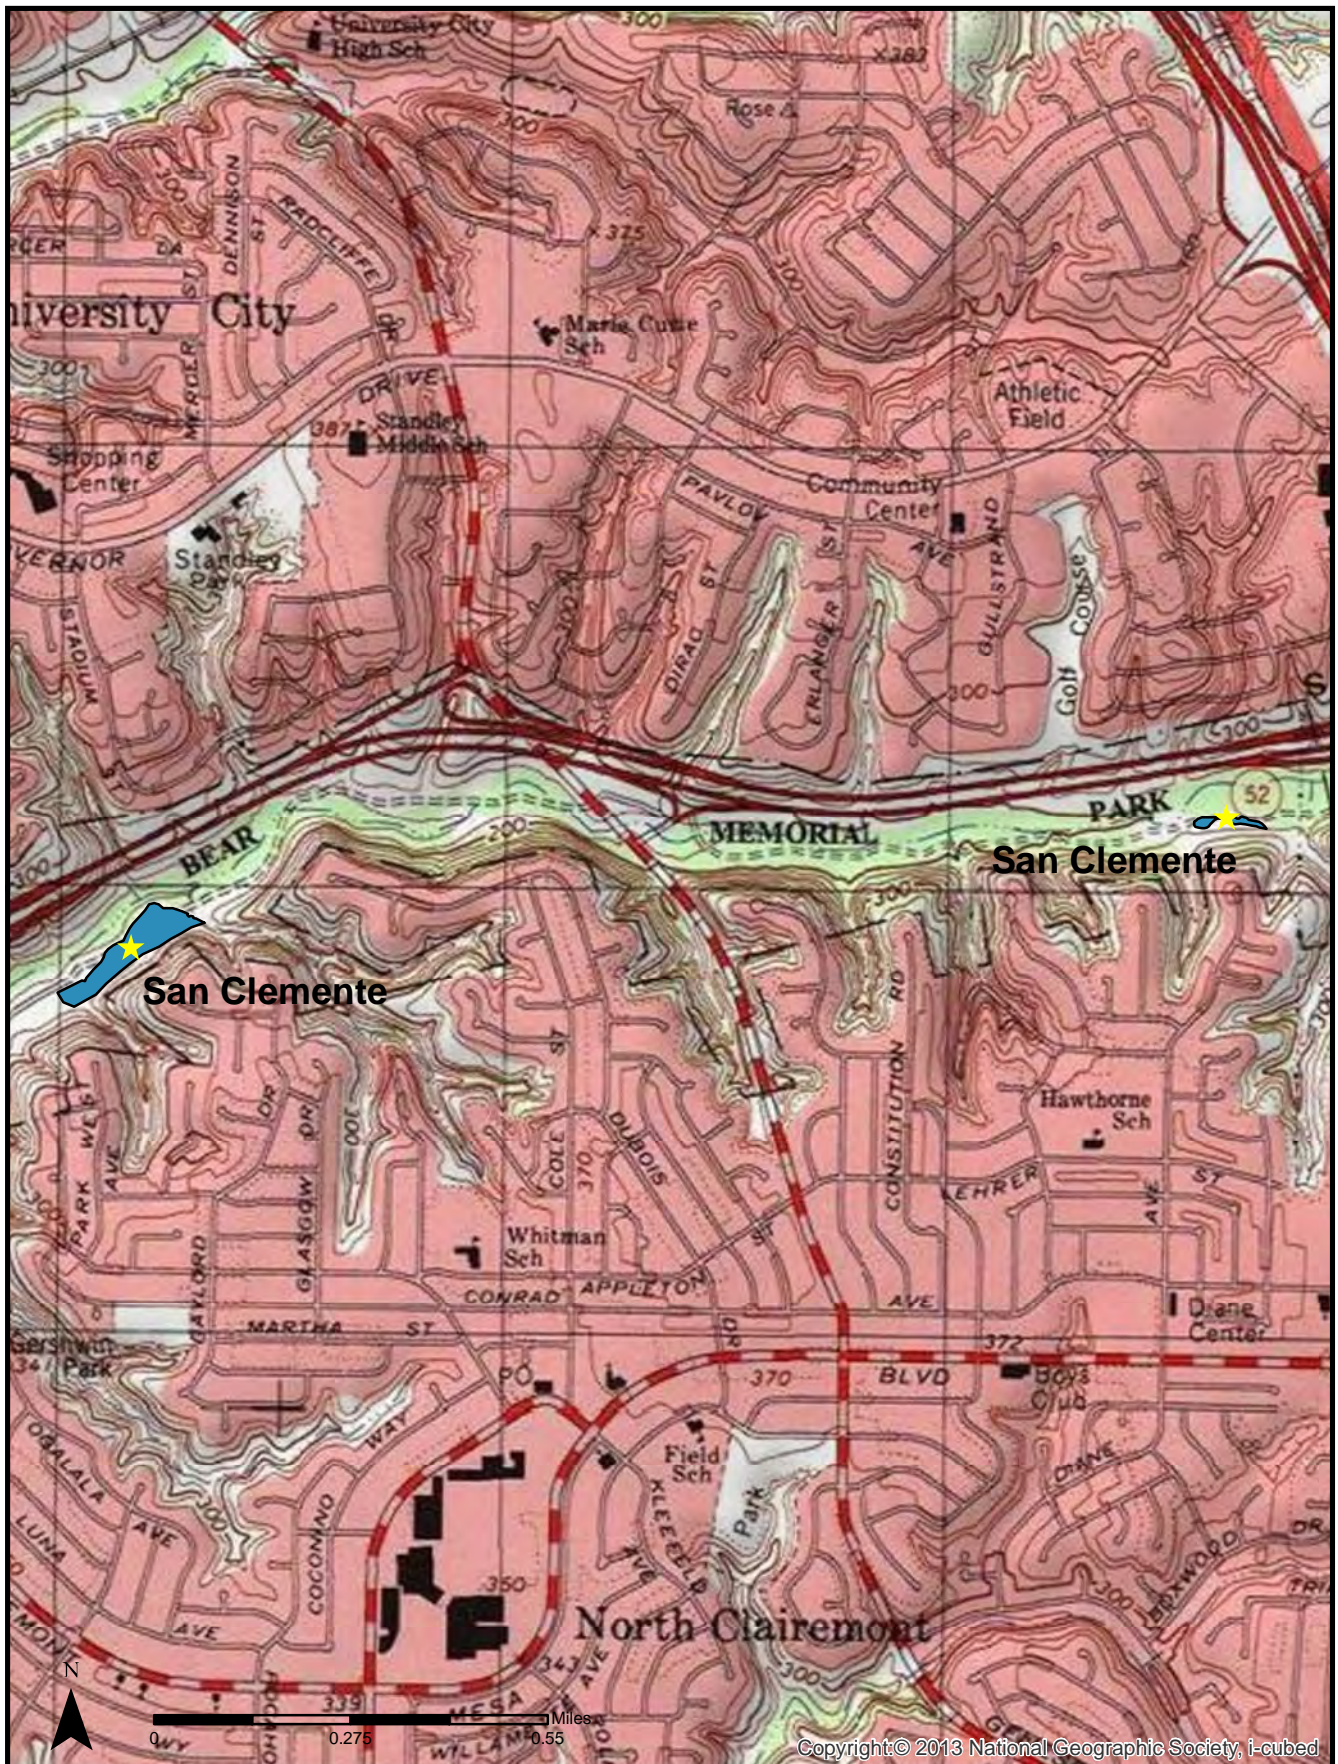

*San Clemente Canyon: Diegan Coastal Sage Scrub with  
Helmeted Guinea fowl*

The project includes the creation of 2.86 acres of wetland habitat (southern willow riparian forest, streambed and emergent wetland) and 2.81 acres upland habitat (Diegan coastal sage scrub and oak woodland).

Construction was initiated in October 2007 and received regulatory sign-off from the ACOE in January 2015. The upland and wetland planting areas for the project have shown steady establishment of target species with vegetative cover in portions of the wetland habitat over 100% cover. The wetlands support a willow over story and a well-developed understory including species such as California rose (*Rosa californica*) and San Diego marsh elder (*Iva hayesiana*). The site will continue to receive maintenance on a semi-annual to quarterly basis to help ensure native habitat continues to increase in maturity and spatial coverage. This year maintenance crews focused on control and removal of non-native annuals such as black mustard and sweet clover. Available mitigation acreage below reflects actual acreage of habitats restored at the end of the year 5 maintenance period and rounded totals of assignments to date.

Mitigation Credit Status			
Habitat Type	Acres	Assigned	Balance
Streambed (Creation)	0.02	0.01	0.01
Emergent Wetland (Creation)	0.20	0	0.20
Riparian Forest (Creation)	2.64	1.99	0.65
Diegan Coastal Sage Scrub (Tier II)	2.42	1.56	0.86
Oak Woodland (Tier I)	0.39	0.19	0.20

## Rancho Mission Canyon Wetland Enhancement Project

The Rancho Mission Canyon Wetland Enhancement Project is located in the City's Rancho Mission Canyon Open Space Park, south of Mission Gorge Road, north of Navajo Road, and on either side of Margerum Way in the Community of Allied Gardens (Figure 6).

*Rancho Mission Wetland Enhancement: Southern Willow Scrub*

The Rancho Mission Canyon Project includes the enhancement of 7.59

acres of wetlands and restoration of 1.53 acres (75% mitigation credit) of wetland transitional habitats. Non-native vegetation was removed from the canyon, followed by revegetation with native southern willow scrub and wetland transitional species. The total area of habitat enhancement runs the entire canyon bottom and encompasses more than 13.5 acres.

The site completed the 5-year long-term maintenance and monitoring period in March 2013. Regulatory sign-off and approval for the project was received in the summer of 2013. The site currently supports target native cover of approximately 100%, exceeding the Year 5 goal of 90%. The site is continuing to mature with dense thickets of vegetation found throughout the riparian corridor. Trees within the site continue to mature with some individuals exceeding 30 feet in height, and the understory is well developed with a diverse variety of herbs and shrubs. During the mitigation assessment in spring 2018 a few isolated non-native species were observed throughout the site including; Mexican fan palm, Canary Island date palm, and pampas grass, these plants were removed and treated during annual maintenance this year.

Mitigation Credit Status			
Habitat Type	Acres	Assigned	Balance
Southern Willow Scrub (Enhancement)	8.74	2.13	6.61

## Tecolote Canyon Mitigation Project

The Tecolote Canyon Mitigation Project provides mitigation for impacts associated with projects within Tecolote, Mt. Elbrus, East Clairemont, and Manning Canyons. The Balboa site is located south of Balboa Avenue, and the Grove site is located south of the Tecolote Golf Course and north of the University of San Diego (Figure 7).

*Tecolote Canyon Mitigation: Southern Willow Scrub with native dodder (Cuscuta sp.)*

The project includes the creation of 1.61 acres of wetland habitat (southern willow scrub, southern cottonwood willow riparian forest, and oak riparian forest) and restoration of 3.37 acres upland habitat (Diegan coastal sage scrub & native grassland). Construction was initiated in February 2007 and the site met its 5-year maintenance goals and received regulatory sign-off in 2013. A qualitative review of the site in spring of 2018 estimated vegetative cover to be approximately 90-100% in the Diegan coastal sage scrub habitats, and 75-100% in the riparian areas. Numerous bird species were observed within the site during the annual assessment including a barn owl (*Tyto alba*) and pair of coastal California gnatcatchers.

Mitigation Credit Status			
Habitat Type	Acres	Assigned	Balance
Riparian Forest (Creation)	1.19	0.80	0.39
Southern Willow Scrub (Creation)	0.42	0.41	0.01
Diegan Coastal Sage Scrub (Tier II)	3.30	3.29	0.01
Native Grassland (Tier I)	0.07	0.06	0.01

## San Diego River Wetland Creation Project

The San Diego River Wetland Creation Project is located on a Public Utilities owned parcel located immediately adjacent to the San Diego River, north of Camino Del Rio North, west of I-15, and east of Mission Center Parkway in the Mission Valley Community of the City of San Diego (Figure 8).

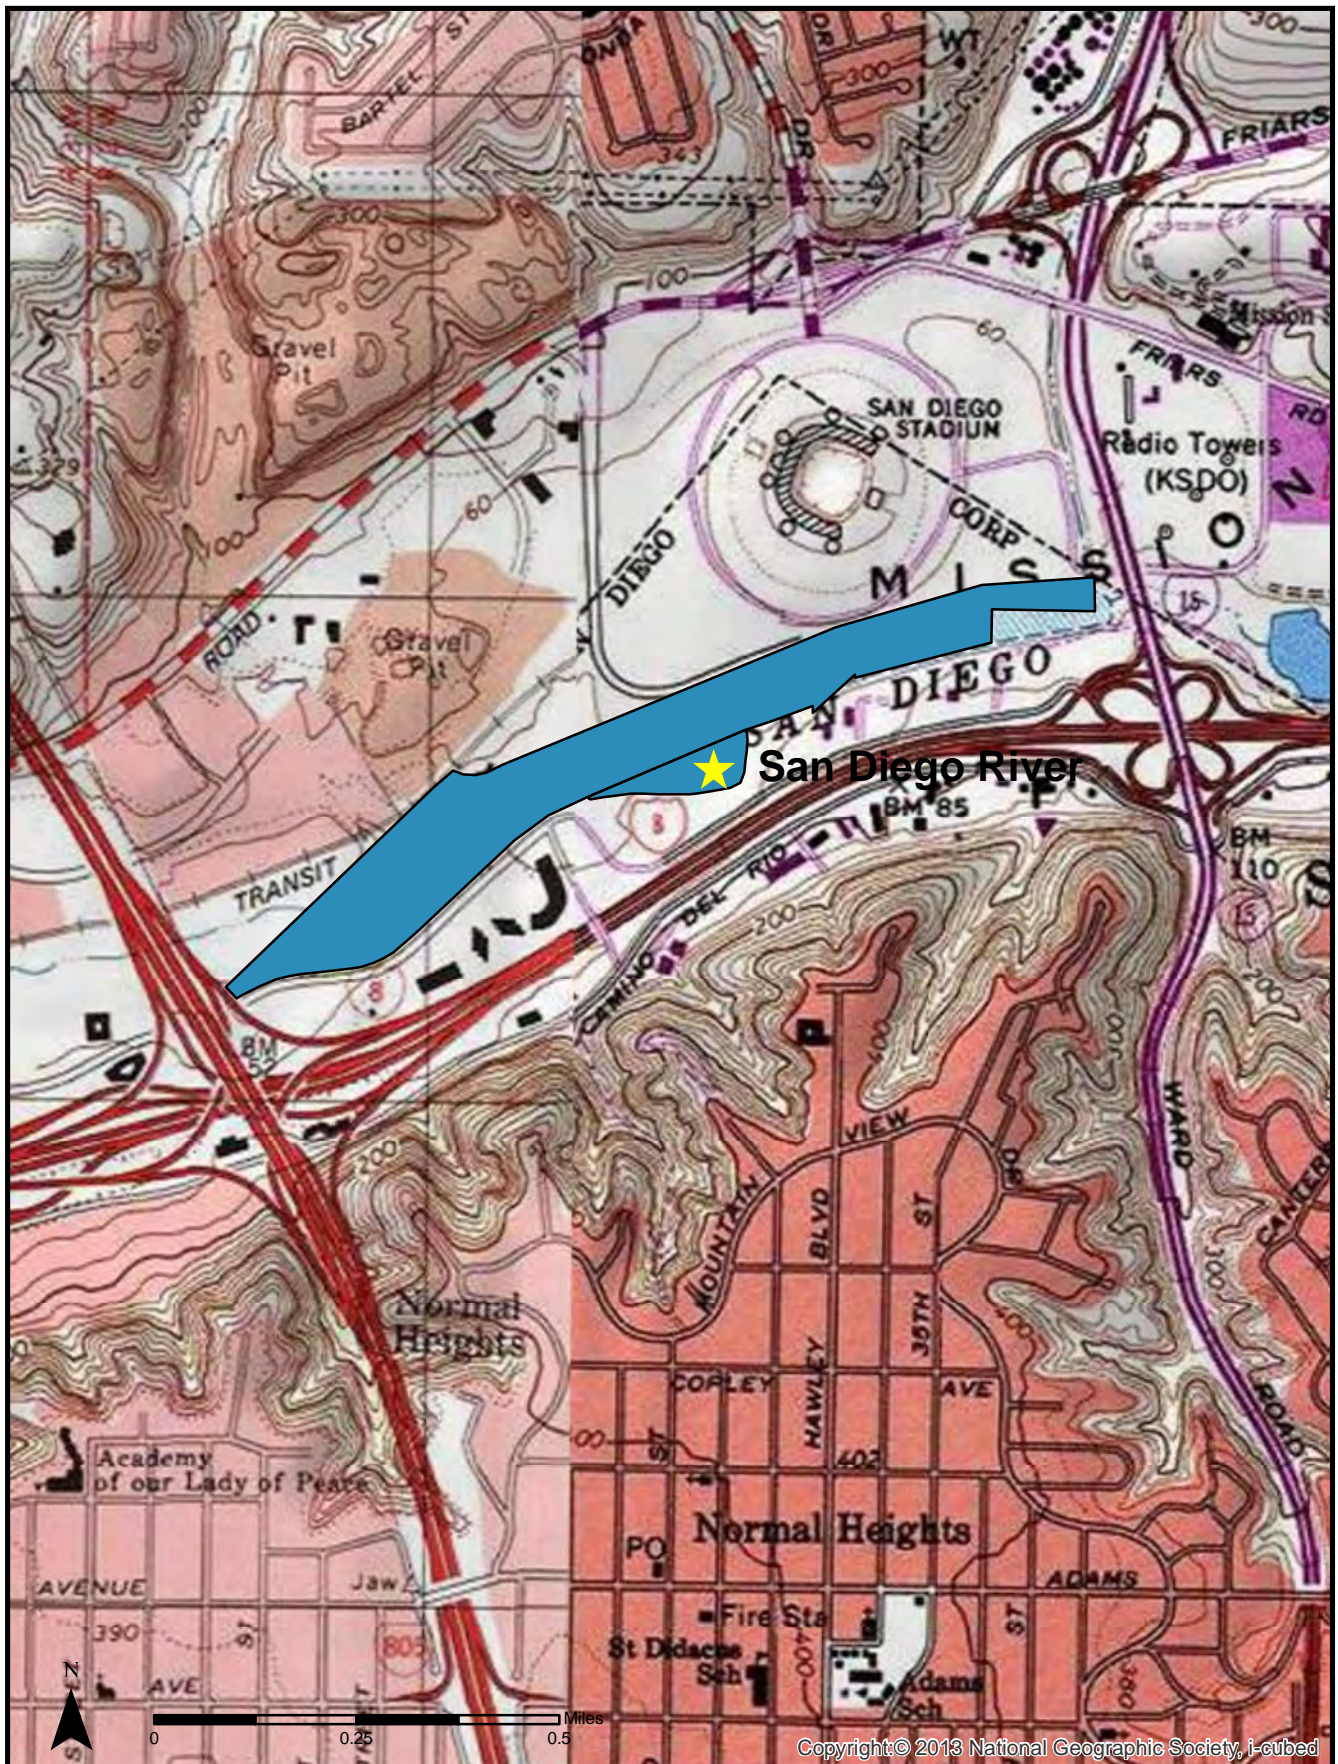

*San Diego River Wetland Creation: Native Riparian Forest*

The site includes the creation of 3.43 acres of native riparian habitat and approximately 2 acres of Diegan coastal sage scrub habitat. The project site was graded in the fall of 2005 to create a basin along the southern bank of the San Diego River. The long-term maintenance, monitoring, and reporting program started June 14, 2006 and the site successfully completed 5-years of maintenance and monitoring in June of 2011. Native vegetation at the site continues to mature with trees reaching heights of 25-30 feet, and total vegetative cover approaching 100%. The site supports a well-developed understory of spiny rush (*Juncus* spp.), rose, and mulefat (*Baccharis salicifolia*). Non-native annuals, primarily sweet clover and mustard were observed sporadically throughout the site, with the highest concentrations occurring on the north and western end. As part of long term management of the site, these areas were treated and supplemental native seed installed. The site will continue to receive semi-annual to quarterly maintenance to help ensure native habitat continues to mature and increase in spatial coverage. Trash from nearby illegal encampments continues to be removed from the site and adjacent areas, the City continues to remove encampments from the area as they are identified. During the 2018 site assessment several songbirds and animal tracks were observed within the site. The most notable observation was the identification a Least Bell's vireo (*Vireo bellii pusillus*) nest within the site, which successfully produced three fledglings. This is the second year in a row a vireo nest has been observed within the site.

Mitigation Credit Status			
Habitat Type	Acres	Assigned	Balance
Riparian Forest (Creation)	3.43	2.19	1.24

## Los Peñasquitos North Wetland Creation Project

Los Peñasquitos North Wetland Creation Project is located in the City of San Diego's Los Peñasquitos Canyon Preserve in the community of Peñasquitos, just north of the Los Peñasquitos Creek (Figure 9).

The project includes the creation of 3.8 acres of wetland habitat, including 3.15 acres of southern willow scrub, 0.43 acres of cottonwood/sycamore woodland, and 0.22 acres of freshwater marsh. The site also includes one acre of Diegan coastal sage scrub habitat to serve as a buffer on the north edge of the site. Regulatory sign-off and approval for the project was received in the spring of 2012.

*Los Peñasquitos North Mitigation Site: Southern willow scrub*

The site was assessed in April 2018 and June 2018 and appeared in good condition. Evidence of high water flows through the site were observed with the presence of debris and a well-defined rack line. This year several willow and cottonwood saplings were observed throughout the site. The site continues to mature with vegetative cover approaching 95% and willows reaching heights of 25 to 35 feet. No trash or debris or unauthorized trails were observed onsite. The site meets the 5<sup>th</sup> year success standard with over 90% target vegetative cover. Vegetation within the wetland habitat is predominately spiny rush, deer grass (*Muhlenbergia rigens*) and various species of willows. Invasive species, including Mexican fan palm, and pampas grass have begun to establish within the wetland. This Non-native vegetation will be treated and removed from the site throughout the year as part of continued long-term monitoring and maintenance. Several species of mammals were observed at this site during the April assessment including; mule deer (*Odocoileus hemionus*), raccoon (*Procyon lotor*) and coyote (*Canis latrans*).

Mitigation Credit Status			
Habitat Type	Acres	Assigned	Balance
Freshwater Marsh (Creation)	0.22	0.22	0
Riparian Woodland (Creation)	0.43	0.43	0
Southern Willow Scrub (Creation)	3.15	2.95	0.2
Diegan Coastal Sage Scrub (Tier II)	1.03	1.03	0

## Lake Murray Mitigation Project

The Lake Murray Mitigation Project is in the City of San Diego's Mission Trails Regional Park. It is located in the area just west of Lake Murray in the Del Cerro neighborhood of the Navajo Community (Figure 10). The mitigation site includes 2.5 acres of wetland enhancement (southern willow scrub habitat) and just over 5.2 acres of upland restoration area (Diegan coastal sage scrub). Official sign-off was received from all of the regulatory agencies by December 2011.

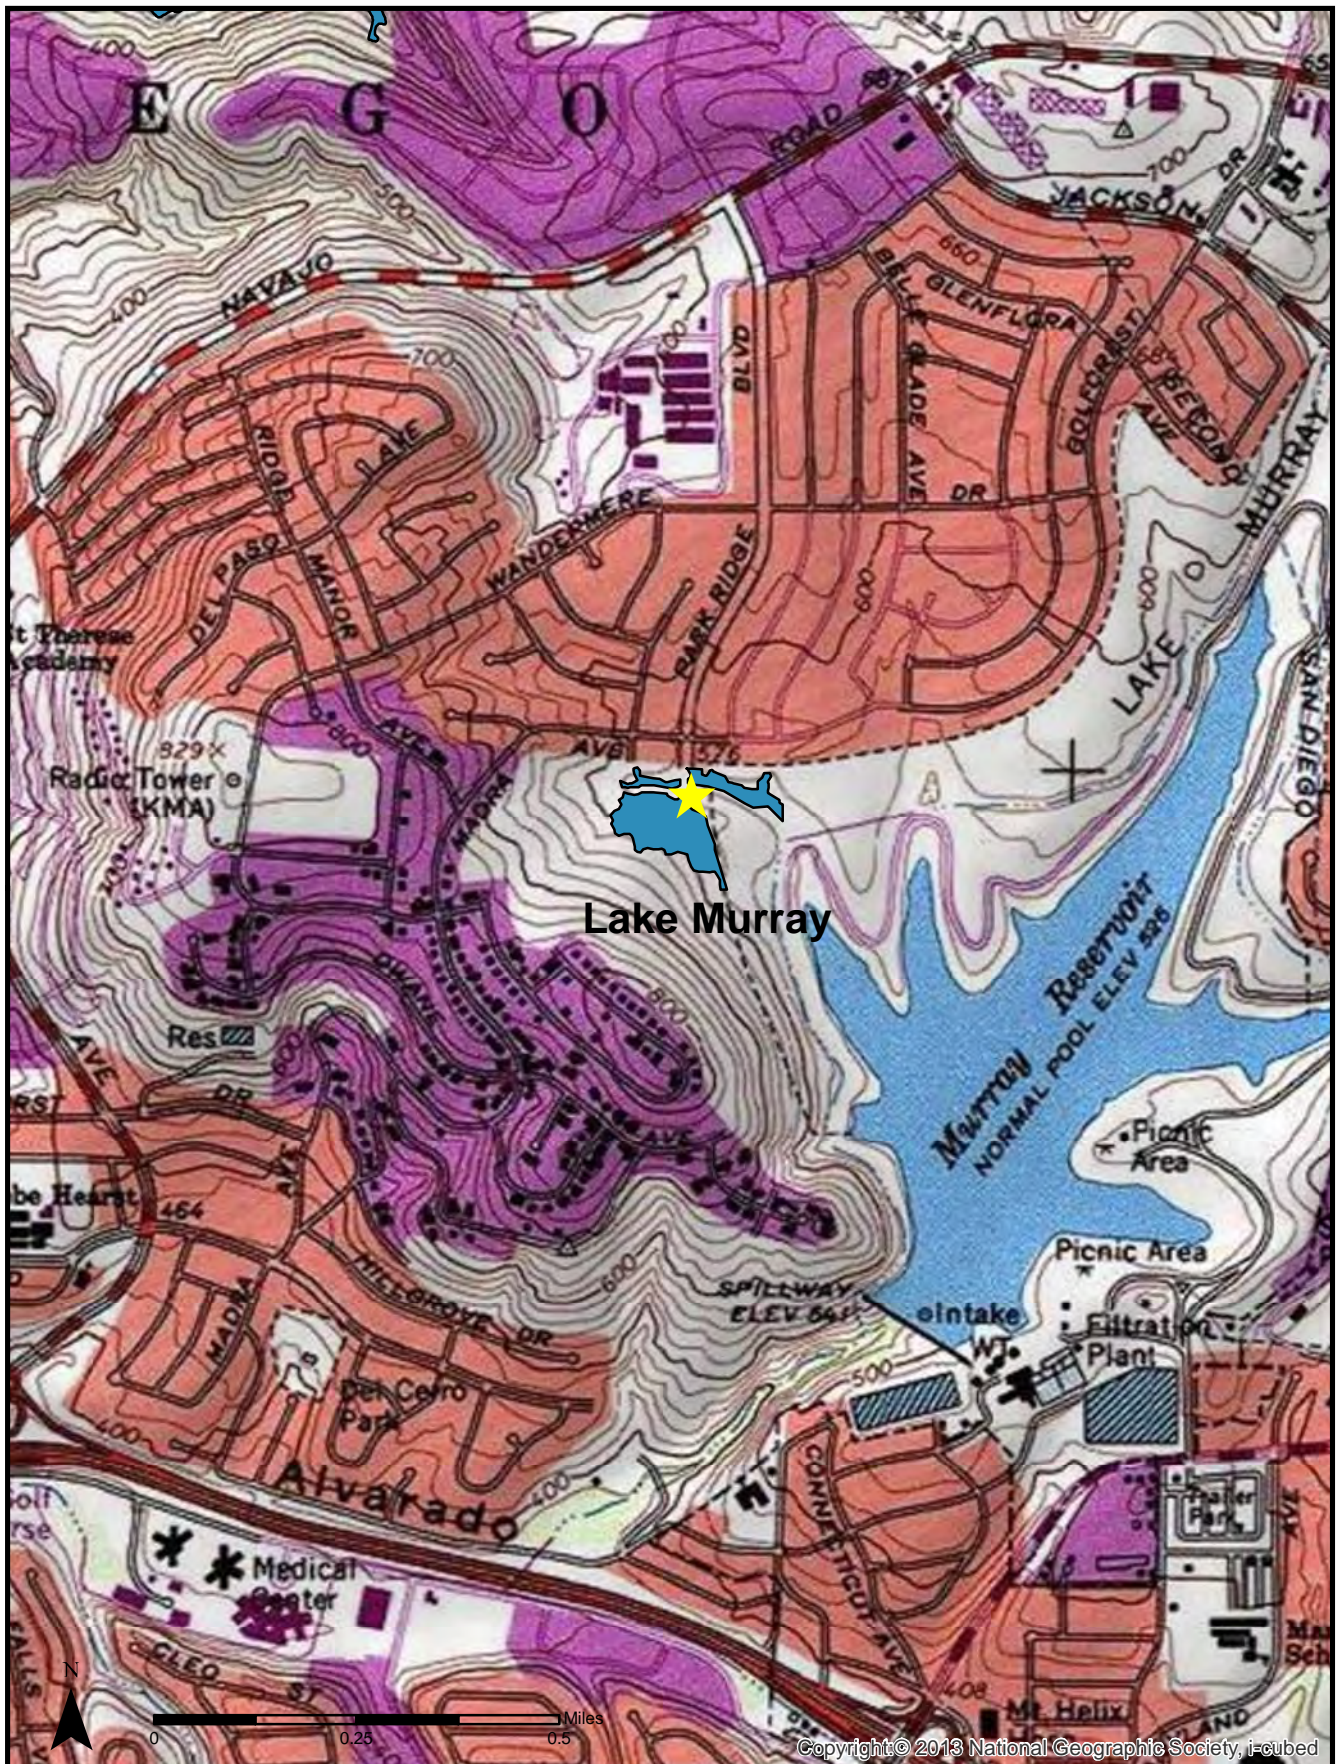

Lake Murray Mitigation: Southern Willow Scrub

The annual assessment survey was conducted May, 2018 to assess the current condition of the mitigation site. Fifth year success criteria required an average combined cover of 90% for the upland restoration and wetland enhancement areas. The wetland enhancement area exceeds 100% native cover throughout most of the defined enhancement site. The wetland over story continues to mature, increasing in density and height with species such as Fremont cottonwood (*Populus fremontii*), Western sycamore (*Platanus racemosa*), and various types of willows reaching heights of 40 feet or more. The understory is diverse with species such as spiny rush, spike sedge (*Carex nardina*) evening primrose (*Oenothera elata*), San Diego marsh elder, and broad-leaved cattail (*Typha latifolia*). Species found within the Diegan coastal sage scrub include California sagebrush, lemonade berry (*Rhus integrifolia*), flattop buckwheat (*Erigonium fasciculatum*), laurel sumac (*Malosoma laurina*), and black sage (*Salvia mellifera*). As part of the annual maintenance effort this year, non-native vegetation was treated and removed from the site. Maintenance was primarily focused in the edges of the upland areas where crews removed black mustard and milk thistles (*Sonchus spp.*) from the edges of the project site. Numerous bird species were observed throughout the site including coastal California gnatcatchers, California thrashers (*Toxostoma redivivum*) and multiple coveys of California quail (*Callipepla californica*).

Mitigation Credit Status			
Habitat Type	Acres	Assigned	Balance
Southern Willow Scrub (Enhancement)	2.5	1.53	0.97
Diegan Coastal Sage Scrub (Tier II)	5.2	5.08	0.31

**Figure 10**

Vicinity Map**

## El Rancho Peñasquitos Wetland Enhancement Project

The mitigation site is located along Los Peñasquitos Canyon approximately 0.5 mile west of Black Mountain Road in the vicinity of the historically designated Johnson Taylor Adobe of Rancho de los Peñasquitos (City of San Diego HRB Site #75). The site is within the MHPA on County and City of San Diego Open Space Land.

*El Rancho Peñasquitos Wetland Enhancement: Riparian forest with non-native palm targeted for removal*

The El Rancho Project included enhancement of 5.53 acres of southern cottonwood willow riparian forest, by eradicating targeted non-native species. Project efforts began March 26, 2006 and regulatory sign-off was received in early 2010. This project treated 6,720 non-native plants, targeted species included Canary Island date palm, Mexican Fan Palm, Eucalyptus, Peruvian pepper tree (*Schinus terebinthifolius*), Brazilian pepper tree, and edible fig (*Ficus carica*).

The El Rancho Peñasquitos Wetland Enhancement Project has met the success criteria outlined in the Conceptual Mitigation Plan. Many of the larger treated plants have begun to deteriorate and decompose, allowing for the establishment of native species in their direct vicinity. Park and Recreation has taken over long-term management of the site and manages the land consistent with the Multiple Species Conservation Plan which includes targeting the treatment or removal of invasive exotics as part of routine park management. During the 2018 assessment, several small palms were identified in the mitigation area. Canary Island date and Mexican fan palms were removed from multiple locations along the Peñasquitos creek. A total of 14 small palms were removed and disposed of at an appropriate facility.

Mitigation Credit Status			
Habitat Type	Acres	Assigned	Balance
Riparian Forest (Enhancement)	5.53	4.69	0.84

## Otay Mesa Upland Mitigation Bank

The Otay Mesa Mitigation Bank is in the Otay Mesa community of the City of San Diego and occurs within the MHPA. The mitigation site is located on undeveloped land that is surrounded by other City of San Diego Park and Recreation Open Space lands and federal land holdings along the U.S /Mexico border. Five habitat types are found onsite and include maritime succulent scrub, non-native grasslands, ruderal, disturbed habitat, and vernal pool. During the 2018 annual

Otay Mesa Upland Mitigation: Maritime Succulent scrub and new exclusion fencing

monitoring visit it was documented that all the fencing installed in February 2014 was intact and functioning as intended. The lack of precipitation in the previous wet season was evident in the mitigation area. During the 2018 monitoring visit in May, 2018 many areas exhibited limited growth and were visibly stressed by lack of precipitation. Additional fencing was installed in 2017 by the Park and Recreation Department on City owned land surrounding the mitigation bank to help further reduce unauthorized off-road vehicle activity.

Sensitive plant species present onsite include San Diego button-celery (*Eryngium aristulatum* var. *parishii*), variegated dudleya (*Dudleya variegata*), snake cholla (*Opuntia parryi serpentina*), San Diego barrel cactus (*Ferocactus viridescens*), San Diego bur-sage (*Ambrosia chenopodiifolia*), south coast saltbush (*Atriplex pacifica*), and San Diego county viguiera (*Viguiera laciniata*). Notable bird species observed in 2018 within the site include California gnatcatcher. Notable animal species observed include black tailed jackrabbit (*Lepus californicus*) and orange-throated whiptail (*Aspidoscelis hyperythra*).

Mitigation Credit Status			
Habitat Type	Acres	Assigned	Balance
Maritime Succulent Scrub (Tier I)	45.43	33.92	11.51

## Stadium Wetland Mitigation Project

The Stadium Wetland Mitigation Project is located within the floodplain of the San Diego River between I-15 and I-805. The site is approximately 57 acres and was dominated by a high number of non-native species including giant reed (*Arrundo donax*), Peruvian pepper tree, Brazilian pepper tree, pampas grass, Canary Island date palm, and eucalyptus. This project has restored native habitat in the area by removing targeted non-native species, installing native plants, and maintaining and monitoring the site for a minimum of 5-years.

Stadium Mitigation Site Riparian Scrub

Work at the Stadium Wetland Mitigation Project started August 2016 with the initial cleanup and removal of illegal encampments. Construction started December 2016, and included removal of all non-native vegetation, installation of the temporary irrigation system, installation of fencing, and installation of native container plants. To date over 250,000lbs of trash / debris has been removed from the project area, over 27 acres of invasive species were also removed. Construction activities were completed in May 2018 with the installation of the last group of container plants. The site has already surpassed Year Zero success criteria as documented in the Year Zero Monitoring Report. The project is now in Year One of the maintenance and monitoring phase with vegetation communities continuing to diversify.

This site has the potential to provide high quality habitat for a number of regionally sensitive species including least Bell's Vireo, southwestern willow flycatcher (*Empidonax traillii extimus*), western pond turtle (*Actinemys marmorata*), yellow billed cuckoo (*Coccyzus americanus*), and two-striped garter snake (*Thamnophis hammondi*), and also improve water quality, and functionality of the San Diego River.

Mitigation Credits are released from this site on a planned phased approach with 15% released upon acceptance of the Project by regulatory agencies, and an additional 25% released upon completion of the invasive species eradication, 120-day plant establishment, and the start of the Five-Year maintenance period. The ACOE has authorized the release of the 40% of the mitigation credits.<sup>1</sup>

---

<sup>1</sup> ACOE Memo Dated October 2, 2018 has authorized the next phase of credit release, to date 40% of Mitigation credits have been released.
